Remove stains before washing

A misconception is that the washing machine immediately removes terrible stains. It is best to soak severe stains in concentrated detergent first. Apply the product with a soft sponge and let it soak for at least 5 hours. Then rinse the soap under cold water and wash the clothing according to the instructions. It saves a long washing program and therefore energy.

Do not run too many short-washing programs

It may seem like an economical choice, but it isn't. This program is not intended to run with a full drum. The power consumption is higher per kilo of laundry and you have to run the washing machine more often. Less is therefore not always More.

Use eco button

With this button, the washing machine washes at a lower temperature. In the eco mode, a wash takes longer, but uses less energy and washes normally soiled laundry well. Most energy is needed for heating water. And not for running the washing machine for longer.

Wash clothes less often

Clothes don't need to be washed after every wear. Unless the clothing is visibly dirty. Try to delay washing by wearing it for another day or several days before it ends up in the laundry basket. Letting it air out for a while also boosts your clothes.

Read the washing symbols carefully

To ensure that the clothes remain beautiful for longer, it is important to carefully read the washing instructions on the label. Here you will find an explanation of at which temperature and with which program you should wash the laundry. The label is usually located on the neck or side seam of the clothing.

Hotter is not always better

To save on your energy bill, it is recommended to wash colder. At 30 degrees is just as clean as at 40 degrees. It is recommended to wash at 60 degrees now and then. This prevents a layer of bacteria and fungi in the drum. Laundry that is suitable for 60 degrees is towels, dishcloths, and bed linen.

Wash time

If there is a double energy meter, it is cheaper to wash in the evening. Energy is cheaper during off-peak hours. Very convenient to set up the function to delay the start time.

Save money and good for the environment

Using a full washing machine saves money and is also good for the environment. If you use laundry bags and use the detergent correctly, you can use less detergent. Too much detergent has been used if the foam is often visible in the washing machine.

No more discolored laundry

Never again a discolored laundry with special color clothes. this allows you to put more types of laundry together and you will have a full drum faster.
